① 增广律

若 $X \to Y \in F$，且 $Z \subseteq U$，则 $XZ \to YZ$ 被 F 逻辑蕴含

$\alpha \to \beta$ 则 $\alpha\gamma \to \beta\gamma$

$$\left.\begin{array}{l} \left.\begin{array}{l} t[\alpha\gamma]=s[\alpha\gamma] \Rightarrow t[\alpha]=s[\alpha] \\ \alpha \to \beta \end{array}\right\} \Rightarrow t[\beta]=s[\beta] \\ t[\alpha\gamma]=s[\alpha\gamma] \Rightarrow t\gamma=s[\gamma] \end{array}\right\} \Rightarrow$$

$$t[\beta\gamma]=s[\beta\gamma] \Rightarrow \alpha\gamma=\beta\gamma$$

② 传递律

~~$\alpha \to \beta$ $\gamma\beta \to \delta$ 则 $\gamma\alpha \to \beta\delta$~~

$$\left.\begin{array}{l} \alpha \to \beta \\ t[\alpha]=s[\alpha] \end{array}\right\} \Rightarrow \left.\begin{array}{l} t[\beta]=s[\beta] \\ \beta \to \gamma \end{array}\right\} \Rightarrow t[\gamma]=s[\gamma] \Rightarrow \alpha \to \gamma$$

①. 合并. 若 $\alpha \to \beta$、$\alpha \to \gamma$ 则 $\alpha \to \beta\gamma$.

$$\left.\begin{array}{l} \alpha \to \beta \Rightarrow \alpha \to \alpha\beta \\ \alpha \to \gamma \Rightarrow \alpha\beta \to \beta\gamma \end{array}\right\} \Rightarrow \alpha \to \beta\gamma$$

②. 分解 若 $\alpha \to \beta\gamma$ 则 $\alpha \to \beta$, $\alpha \to \gamma$.

$$\left.\begin{array}{l} \gamma \subseteq \beta\gamma \\ \text{自反律} \end{array}\right\} \Rightarrow \left.\begin{array}{l} \beta\gamma \to \gamma \\ \alpha \to \beta\gamma \end{array}\right\} \Rightarrow \alpha \to \gamma.$$

③. 伪传递 若 $\alpha \to \beta$, $\gamma\beta \to \delta$ 则 $\gamma\alpha \to \delta$

$$\left.\begin{array}{l} \alpha \to \beta \Rightarrow \gamma\alpha \to \gamma\beta \\ \gamma\beta \to \delta \end{array}\right\} \Rightarrow \gamma\alpha \to \delta$$
